

**Complex permeability vs.Frequency**

Initial permeability	$\mu_i$	25°C	120±20%
Saturation magnetic flux density	$B_s(T)$	25°C	430
Relative loss factor	$\tan\delta/\mu_i$	25°C	≤65
100kHz	( $\times 10^{-6}$ )		
Relative temperature coefficient	$\alpha_{\mu}$	20 ~ 60°C	65%
	( $\times 10^{-6}/^{\circ}C$ )		
Curie temperature	$T_c(^{\circ}C)$		>300
Electrical resistivity	$\rho(\Omega \cdot m)$		$10^5$
			$6.2 \times 10^{-10}$

Test core L Formid(mm)
